

## Referring a baby back to base unit (NICU to SCU): agreed regional process

### NOTES:

\* The medical handover should be given by the person with most complete knowledge/information about the baby being moved, their needs and likely future care/investigation requirements: this will often be the consultant but may also be a registrar.

NNeTS will aim to move babies for repatriation within 24 hours of referral but there is no requirement to do so if higher priority work is ongoing. Please ensure parents are not given unreasonable expectations of when their baby will be moved closer to home.
